Scabies Alert

Your child *may have been* exposed to Scabies.

What to look for:

- ✓ Small red threads, or "tracks," under the skin in soft areas, such as the armpit, elbow, finger webbing, abdomen or genital area.
- ✓ Redness, swelling and blister which cause severe itching, especially at night.
- ✓ "Tracks" appear 2-6 weeks after exposure
- ✓ Symptoms can last up to 20 days after initial infestation.
